

# EROAD

## Oregon Intrastate Training Checklist

Use this checklist to ensure your drivers are trained on how to properly enable the Oregon Intrastate Ruleset on their in-cab device.

**To be able to use the Oregon Intrastate Ruleset on EROAD's in-cab device, a driver must:**

- Login to the in-cab device and go to the **Home** screen.

- Tap the center of the Home Screen over the counters to access the **Hours of Service** screen.

- Tap the **RULESET** tab on the **Hours of Service** screen, 3rd tab to the center right.

- The driver will then be able to enable the OR Property 70/7 or OR Property 80/8 Intrastate Ruleset by tapping the circle to the left of the ruleset (**enabled when blue**). If the driver needs to switch back to the USA Property 60/7 or 70/8 ruleset, they would also do that from this screen.

**Note:** If the Driver cannot see the OR Property 70/7 or OR Property 80/8 Intrastate ruleset on their in-cab device, it has not been enabled for them first in the back-office DEPOT platform. In DEPOT, tap **Driver** from the red banner, then click on specific driver's name. Their Personal Driver Profile will show up on the right. Under the **Hours of Service** section, tap on all the **Permitted Rulesets** for that driver, i.e. OR Property 70/7, OR Property 80/8, USA Property 60/7 or USA Property 70/8. The driver will now have the enabled rulesets as options on their in-cab device.
